We keep your highest score Requirements analysis To Pass 80% or higher Design and plan 🖒 Like 🖓 Dislike 🏻 🖰 Report an issue ∠<sup>7</sup> Expand Correct
 In the design and plan stage, database administrators work on logical and physical design. Index ○ Key Which of the following statements is correct about modifying the configuration of a cloud-based relational database? You can safely discard the configuration files after modifying them. You need to modify the configuration files directly. You can modify the configuration while the service is running. 4. A storage group is a grouping of storage paths or containers based on which of the following? Performance
Name Capacity Backup scheduling Validate backups Secure back up files ∠<sup>7</sup> Expand 6. Transaction logs typically have which of the following characteristics? Binary format O Plain text Human readable 7. What happens if you store backup data outside the RDBMS? Must secure backup copy O Difficult to access Omplicates backup/restore O Difficulty restoring 8. Assume that a particular database issue, should it occur, is important but does not require your immediate attention. Which automated database feature should you use to inform you when this issue occurs? Notifications Correct
You should use notifications to inform you of an issue that is important but does not require your immediate attention such as failed login attempts. Authentication Authorization 10. Which of these is NOT a decision you must make about implementing a backup plan? Encryption Who will be responsible for the plan O Hot or cold backup ⊗ Incorrect
Please review the Backup Policies video. 11. The principle of least privilege should be followed for all users, groups, and roles. Which of the following describe this principle? Multiple, more granular groups or roles Separate accounts with fewer privileges Fewer, granular groups and roles Groups and roles with same privileges ⊗ Incorrect Please review the Users, Groups, and Roles video. DENY 13. Which storage engine available in MySQL is suitable for most data storage needs? InnoDB ○ MyISAM BLACKHOLE ∠<sup>∧</sup> Expand Correct InnoDB is suitable for most data storage needs and is MySQL's default storage engine. 14. Which of the following is a method you can use to audit database activity? Use a user validation function built into the database system. Attach actions to events that occur in the database. Enable full-scale encryption of all database files. Run an SQL injection string on your database. Symmetric encryption Transparent data encryption Full disk encryption Asymmetric encryption 16. What effect does encryption and decryption have on your database? Increased longevity
Decreased stability Correct
Because of the time and effort that it takes the algorithm to process the data, any type of encryption and decryption will decrease the performance of your database. Query

© User 18. Which MySQL server log records connections and queries received from clients? 1/1 point Relay log ○ Error log Slow query log System monitors Monitoring tables Event monitors Monitoring snapshots 20. Database automation works best with which types of administrative tasks? Time-consuming and repetitive tasks Quick and repetitive tasks
Quick and varied tasks Time-consuming and varied tasks 21. In Db2, what does the RUNSTATS command do? Reorganizes physical storage of table data
Frees up space on all tables Non-unique, nullable, non-clustered O Unique, nullable, clustered Non-unique, non-nullable, clustered ∠<sup>7</sup> Expand Correct
 A primary key is always unique, non-nullable, and clustered.
 Improper storage configuration Out of disk space Bugs in OS or RDBMS ∠<sup>7</sup> Expand

24. Which of the following SQL server logs shows informational and error events?

⊗ Incorrect Refer to the Using Status Variables, Error Codes, and Documentation video.

Error logTrace logObject logEvent log

∠<sup>7</sup> Expand

Secure movement

Efficiency of file transfer

Accurate access

∠<sup>7</sup> Expand

Correct
 Great, you got all the right answers.
