6/22/23, 4:17 PM Graded Quiz: Final Quiz | Coursera **Due** Jul 9, 11:59 PM EDT Graded Quiz: Final Quiz Submit your assignment Due Jul 9, 11:59 PM EDT Attempts 3 every 24 hours Receive grade
To Pass 80% or higher Monitor and maintain 🖒 Like 🖓 Dislike 🏻 🖯 Report an issue 3. Database installation saves the system information into files. What are these files called? Means of configuration Capacity of container Validate backups Backup scheduling O Secure back up files Correct
 Always check that the backup file or files are valid and the restore plan is successful.
 6. Transaction logs typically have which of the following characteristics? Assume that a particular database issue, such as extremely low drive space, would require your urgent attention
 should it occur. Which automated database feature should you use to inform you when this issue occurs? Reports 9. Which security method ensures that each user has the appropriate level of access to objects and data? 1/1 point Encryption Authorization Correct
 Through authorization, you grant each user the appropriate permissions, or privileges, to access objects and data.
 10. Which of these is NOT a decision you must make about implementing a backup plan? 1/1 point 11. The principle of least privilege should be followed for all users, groups, and roles. Which of the following describe 1/1 point this principle? Separate accounts with fewer privileges Fewer, granular groups and roles 12. Which of the following statements can you use to remove privileges granted to a user? 1/1 point REVOKE Correct
 You can use the REVOKE statement to remove privileges granted to a user. ○ csv ○ MyISAM Transparent data encryption Full disk encryption 16. What is the main difference between symmetric and asymmetric encryption? Advanced encryption Number of keys Correct
 Symmetric encryption uses the same key for encryption and decryption. Asymmetric encryption uses a
public key for encryption and a private key for decryption. Which transactions are consuming the most resources How well the system is responding to inbound requests User session log Ouery log Diagnostic log Monitoring tables 20. What is the process of monitoring database changes to quickly identify weak links and performance issues? 1/1 point O Database configuration check Schema object check O Data dictionary check 21. In MySQL, what does the OPTIMIZE TABLE command do? Shows a checksum for the contents of a table Generates statistics about a table's data Correct
The OPTIMIZE TABLE command reorganizes the physical storage of table data and associated index data.
This reorganization reduces storage space and improves I/O efficiency when accessing the table. 22. There are a few core principles to consider when designing indexes. Which core principle involves knowing size of the data sets that the database will contain? Onderstand the most frequently used queries. Understand the indexing options for better performance. Understand how the database will be used. Correct
 When designing an index, one of the core principles you should consider is to understand how the database will be used. For example, consider if you will use the database for storing and retrieving large data sets. 23. Which of the following actions might fix an issue with server configuration? Adding more physical RAM Increasing the number of allowed connections 24. In an SQL server, when is an error log created? 0 / 1 point When the SQL server experiences an error When the SQL server starts When the SQL server shuts down When the SQL server receives an administrator request  $\bigotimes$  **Incorrect** Refer to the Using Status Variables, Error Codes, and Documentation video. Efficiency Consent Transparency Correct
When you collect data, you should be transparent about what data you will collect, what you will do with the data, who will have access to the data, how you will store the data, and how you will dispose of the data when finished with it. Integrity Correct Be clear about your procedures and policies and follow them consistently. As far as you can, ensure that others in your organization also follow the correct procedures and policies. Correct
 Great, you got all the right answers.
